GENERAL CODING INSTRUCTIONS

General coding instructions

You are classifying a Telegram post on 13 separate variables.

The prompt is organized into three parts:

1. Concept explanations

These define the concepts that are referenced in the variable-specific coding instructions.

2. Variable-specific Task and Code sections

Each variable has its own Task and Code section. For each variable, use its Task and Code as the decision rule and use the relevant concept explanations only to interpret the concepts referenced in that Task and Code.

3. The Telegram post

Apply the coding instructions to the Telegram post provided by the user.

Follow these general rules:

- Evaluate all 13 variables independently. Do not use the classification of one variable as evidence for the classification of another variable.
- The same claim may provide evidence for more than one variable if it independently satisfies the coding criteria for each of those variables. A post may therefore receive a value of 1 on multiple variables simultaneously.
- When a variable requires multiple conditions, those conditions may be satisfied by different claims within the same post unless the variable-specific Task explicitly states otherwise.
- Do not require the post to use the same wording as the coding criteria or concept explanations. Code based on the meaning of the claims.

=====

=====

CONCEPT EXPLANATIONS

=====

=====

CONCEPT 1 OF 6

Concept ID:

domestic_legitimacy

Explanation of what constitutes claims that portray an actor as domestically legitimate

A claim portrays an actor as domestically legitimate if it portrays at least one of the following positively:

Actor's ideological legitimacy

- The claim portrays the ideology, values, goals, or political direction of the actor as desirable, justified, or beneficial.

Actor's historical legitimacy

- The claim portrays the actor's historical foundations, claim to authority, or historical justification for exercising power as strong, clear, justified, or generally legitimate.

Actor's leadership

- The claim portrays the actor's leader or political leadership as competent, just, strong, responsible, moral, honest, or as otherwise possessing desirable characteristics.

Actor's institutional legitimacy

- The claim portrays the actor's political institutions or institutional basis for exercising authority as legitimate, representative, just, stable, effective, or functioning properly.

Actor's performance legitimacy

- The claim portrays the actor as successful, competent, or effective in achieving political, military, economic, administrative, diplomatic, or societal objectives.

Indirect legitimization of an actor

The actor does not have to be mentioned explicitly for a claim to portray the actor as domestically legitimate. For example, a claim can portray actor (a) as domestically legitimate if it portrays another actor (b) in a way that indirectly portrays actor (a) positively on one or more of the five dimensions above.

Actor (a) can therefore also be portrayed indirectly as domestically legitimate by portraying an opposing actor (b) negatively if this simultaneously implies a positive portrayal of actor (a) on one or more of the five dimensions above.

For example, a portrayal of the Ukrainian military as militarily unsuccessful could simultaneously imply the successful performance of the Russian military leadership and regime

Concept ID:

domestic_illegitimacy

Explanation of what constitutes claims that portray an actor as domestically illegitimate

A claim portrays an actor as domestically illegitimate if it portrays at least one of the following negatively:

Actor's ideological legitimacy

- The claim portrays the actor's ideology, values, goals, or political direction as undesirable, unjustified, harmful, or otherwise illegitimate.

Actor's historical legitimacy

- The claim portrays the actor's historical foundations, claim to authority, or historical justification for exercising power as absent, false, unjustified, or illegitimate.

Actor's leadership

- The claim portrays the actor's leader or political leadership as incompetent, corrupt, weak, irresponsible, immoral, dishonest, or as otherwise possessing undesirable characteristics.

Actor's institutional legitimacy

- The claim portrays the actor's political institutions or institutional basis for exercising authority as illegitimate, unrepresentative, corrupt, unstable, ineffective, or not functioning properly.

Actor's performance legitimacy

- The claim portrays the actor as unsuccessful, incompetent, ineffective, or unable to achieve political, military, economic, administrative, diplomatic, or societal objectives.

Indirect delegitimization of an actor

The actor does not have to be mentioned explicitly. A claim can also portray actor (a) as domestically illegitimate if it portrays another actor (b) in a way that indirectly portrays actor (a) negatively on one or more of the five dimensions above.

For example, a claim portraying Putin as highly popular and likely to win an election may also indirectly portray the political opposition as domestically illegitimate by implying that the opposition lacks comparable popular support, and therefore portraying the opposition's institutional legitimacy negatively.

CONCEPT 3 OF 6

Concept ID:

positive_relationship

Explanation of what constitutes a positive relationship

A claim portrays a positive relationship between an actor and an international actor if it describes a cooperative, allied, supportive, and/or mutually beneficial relationship between these actors.

This means that positive relationships include, but are not limited to:

- an alliance
- formal cooperation
- a strategic partnership
- diplomatic cooperation
- mutual political support
- economic cooperation
- military cooperation
- an official state visit
- friendly or constructive relations
- coordinated action toward a shared objective.

CONCEPT 4 OF 6

Concept ID:

negative_relationship

Explanation of what constitutes a negative relationship

A claim portrays a negative relationship between an actor and an international actor if it describes a hostile, adversarial, conflictual, and/or mutually harmful relationship between these actors.

This means that negative relationships include, but are not limited to:

- armed conflict or war
- military confrontation
- sanctions
- diplomatic conflict or the severing of diplomatic relations
- political hostility
- economic conflict
- support for opposing sides in the same conflict
- public accusations or hostile official statements
- legal prosecution or international arrest warrants
- hostile actions directed toward one another

- coordinated action intended to undermine, weaken, or defeat the other actor.

CONCEPT 5 OF 6

Concept ID:

collective_security_threat

Explanation of what constitutes a collective security threat

A collective security threat is a threat directed at the safety, security, territorial integrity, or continued existence of the Russian people or the Russian nation as a whole.

The Russian people should be interpreted broadly to include Russian citizens, Russian society, the Russian state, and Russian minorities living outside Russia.

Examples of collective security threats include, but are not limited to:

- military attacks

- terrorism
 - sabotage
 - attacks on critical or civilian infrastructure
 - foreign invasion
 - attempts to destroy or seriously weaken the Russian state
 - threats against Russian populations outside Russia.
-

CONCEPT 6 OF 6

Concept ID:

russian_regime_elite_actor

Explanation of what constitutes a Russian regime elite actor

A Russian regime elite actor refers to:

1. Vladimir Putin
2. members of the Russian regime's senior leadership who are directly connected

to Putin (for example, ministers)

3. actors hierarchically subordinate to the senior leadership, such as governors, senior military officers, heads of state agencies, or senior civil servants

4. other actors holding positions of political, administrative, military, economic, or security authority within the Russian regime who have a clear hierarchical relationship to Putin or members of the Russian regime's senior leadership.

=====

=====

VARIABLE-SPECIFIC CODING INSTRUCTIONS

=====

=====

VARIABLE 1 OF 13

Variable ID:

domestic_legitimization_russian_regime

Task

Determine whether the post contains one or more claims that portray the Russian regime as domestically legitimate (as defined by the explanation of what constitutes claims that portray an actor as domestically legitimate).

Treat a claim as portraying the Russian regime as domestically legitimate whenever it positively portrays the Russian regime on at least one of the dimensions specified in the concept explanation.

Central examples include claims portraying:

- the Russian military as successful in Ukraine;
- the regime as ensuring economic performance;
- Russian authorities as successfully defending, liberating, or protecting territory or people;
- Russian authorities as successfully pursuing the interests of Russia or the Russian people.

Importantly, a positive portrayal does not require explicit praise or explicitly

evaluative language. A factual or descriptive claim portraying the Russian regime, its authorities, institutions, military forces, or other regime actors as capable, effective, functioning successfully, possessing strong capacities, or able to achieve beneficial outcomes can also constitute a positive portrayal through performance legitimacy.

However, basic claims about government institutions functioning as normally expected should not by themselves be considered positive claims about regime performance.

- For example, a ministry hosting a webinar is not sufficient.
- Normal functioning can be sufficient when the context itself makes that functioning an achievement, such as continued functioning during Ukrainian bombardment.

Code

1 = The post contains at least one claim that portrays the Russian regime as domestically legitimate.

0 = The post does not contain a claim that portrays the Russian regime as domestically legitimate.

Only determine whether at least one such claim is present.

The number of such claims does not matter.

VARIABLE 2 OF 13

Variable ID:

domestic_legitimization_russian_regime_ex_wagner

Task

Determine whether the post contains one or more claims that portray the Russian regime as domestically legitimate (as defined by the explanation of what constitutes claims that portray an actor as domestically legitimate), excluding posts where domestic legitimization is based solely on claims about the Wagner Group and/or Prigozhin.

Treat a claim as portraying the Russian regime as domestically legitimate whenever it positively portrays the Russian regime on at least one of the dimensions specified

in the concept explanation.

Central examples include claims portraying:

- the Russian military as successful in Ukraine
- the regime as ensuring economic performance
- Russian authorities as successfully defending, liberating, or protecting territory or people
- Russian authorities as successfully pursuing the interests of Russia or the Russian people

Importantly, a positive portrayal does not require explicit praise or explicitly evaluative language. A factual or descriptive claim portraying the Russian regime, its authorities, institutions, military forces, or other regime actors as capable, effective, functioning successfully, possessing strong capacities, or able to achieve beneficial outcomes can also constitute a positive portrayal through performance legitimacy.

However, basic claims about government institutions functioning as normally expected should not by themselves be considered positive claims about regime performance.

- For example, a ministry hosting a webinar is not sufficient.
- Normal functioning can be sufficient when the context itself makes that functioning an achievement, such as continued functioning during Ukrainian bombardment.

Code

1 = The post contains at least one claim that portrays the Russian regime as domestically legitimate that is not solely based on portrayals of the Wagner Group and/or Prigozhin.

0 = The post does not contain a claim that portrays the Russian regime as domestically legitimate.

0 = The post contains one or more claims that portray the Russian regime as domestically legitimate, but all such claims are based solely on portrayals of the Wagner Group and/or Prigozhin.

Only determine whether at least one such claim is present.

The number of such claims does not matter.

VARIABLE 3 OF 13

Variable ID:

regime_positive_link_legitimate_international_actor

Task

Determine whether the post satisfies both of the following conditions with respect to the same international actor:

Condition 1:

The post contains one or more claims that portray an international actor as domestically legitimate (as defined by the explanation of what constitutes claims that portray an actor as domestically legitimate).

Do not require explicit praise or explicitly evaluative language. A factual or descriptive claim portraying the international actor as capable, effective, functioning successfully, possessing strong capacities, or able to achieve

beneficial outcomes can also satisfy this condition.

AND

Condition 2:

The post contains one or more claims that portray a positive relationship between that same international actor and the Russian regime (as defined by the explanation of what constitutes a positive relationship).

Central examples include claims portraying:

- the Russian military as supporting or defending a foreign government or population against an external threat, which has the support of its people
- a foreign government or country as supporting Russia during a crisis or conflict in order to protect shared interests, public welfare, or mutual security.

Code

1 = The post satisfies both conditions with respect to the same international actor.

0 = The post does not satisfy both conditions with respect to the same international actor.

Only determine whether both conditions are satisfied with respect to the same international actor.

The number of claims satisfying each condition does not matter.

VARIABLE 4 OF 13

Variable ID:

regime_negative_link_illegitimate_international_actor

Task

Determine whether the post satisfies both of the following conditions with respect to the same international actor:

Condition 1:

The post contains one or more claims that portray an international actor as

domestically illegitimate (as defined by the explanation of what constitutes claims that portray an actor as domestically illegitimate).

Do not require explicit criticism or explicitly evaluative language. A factual or descriptive claim can also satisfy this condition when it portrays the international actor as unsuccessful, ineffective, incompetent, possessing weak capacities, producing harmful outcomes, or engaging in illegitimate conduct.

AND

Condition 2:

The post contains one or more claims that portray a negative relationship between that same international actor and the Russian regime (as defined by the explanation of what constitutes a negative relationship).

The relationship may be expressed through actions by actors representing or belonging to the international actor.

Central examples include claims portraying:

- an international actor as supporting, organizing, enabling, or being connected to terrorism, extremist violence, or other serious attacks against Russia;

- an international actor as threatening, coercing, arming, or otherwise supporting hostile actions directed against Russia or the Russian regime.

Importantly, military confrontation or other hostile interaction with Russia can satisfy Condition 2, but does not by itself satisfy Condition 1. The same international actor must separately be portrayed as domestically illegitimate.

Code

1 = The post satisfies both conditions with respect to the same international actor.

0 = The post does not satisfy both conditions with respect to the same international actor.

Only determine whether both conditions are satisfied with respect to the same international actor.

The number of claims satisfying each condition does not matter.

Variable ID:

regime_protector_collective_security_threat

Task

Determine whether the post contains one or more claims that portray the Russian regime as successfully protecting the Russian people against a collective security threat (as defined by the explanation of what constitutes a collective security threat).

Do not require the post to explicitly state that the Russian regime is protecting the Russian people. A factual or descriptive claim can satisfy the criterion when it portrays the Russian regime, its authorities, institutions, military forces, or other regime actors as taking effective action to prevent, repel, stop, contain, weaken, investigate, prosecute, or otherwise counter a collective security threat or its perpetrators.

Central examples include claims portraying:

- Russian military or security forces as successfully preventing, intercepting, repelling, or removing a collective security threat directed against Russian

territory or people;

- Russian authorities as successfully investigating, prosecuting, or otherwise countering terrorism or other collective security threats.

This includes successful protective action against an ongoing threat as well as effective responses to a threat that has already occurred.

Importantly, successful Russian military action is not sufficient by itself. General battlefield advances, attacks on Ukrainian forces, or losses inflicted on an opponent should not be coded as protection unless the claim portrays the action as preventing, repelling, removing, or otherwise countering a collective security threat to the Russian people.

Code

1 = The post contains at least one claim that portrays the Russian regime as successfully protecting the Russian people against a collective security threat.

0 = The post does not contain such a claim.

Only determine whether at least one such claim is present.

The number of such claims does not matter.

VARIABLE 6 OF 13

Variable ID:

domestic_delegitimization_regime_threat_actors

Task

Determine whether the post contains one or more claims that portray at least one of the following specific actor groups as domestically illegitimate (as defined by the explanation of what constitutes claims that portray an actor as domestically illegitimate):

- Alexei Navalny and/or actors explicitly portrayed as part of the political opposition associated with the Russian regime;
- the Wagner Group and/or Yevgeny Prigozhin;

- the perpetrators of the Crocus City Hall attack and/or ISIS-Khorasan (shortened as ISIS-K).

Importantly, a negative portrayal does not require explicitly negative or evaluative language. A factual or descriptive claim can constitute a negative portrayal when it presents one of these specified regime-threat actors, its characteristics, status, conduct, actions, or consequences in a way that portrays the actor as illegitimate.

Central examples include portraying one of the specified actors as:

- criminal, extremist, terrorist, disloyal, unlawful, threatening, or destabilizing;
- responsible for harmful actions or consequences, or officially designated or treated as illegitimate in a way that conveys such a portrayal.

The actor restriction is essential. Do not code other opposition figures, dissidents, terrorists, extremists, traitors, or other negatively portrayed actors unless they belong to one of the three specified actor groups above. For example, it is not sufficient that someone is described as a terrorist for the claim to be about ISIS-K or the Crocus City Hall perpetrators. The claim must specifically concern ISIS-K, the Crocus City Hall perpetrators, or another actor explicitly identified as belonging to one of the specified groups.

Code

1 = The post contains at least one claim that portrays one or more of the three specified actor groups as domestically illegitimate.

0 = The post does not contain such a claim.

Only determine whether at least one such claim is present.

The number of such claims does not matter.

VARIABLE 7 OF 13

Variable ID:

regime_threat_actor_positive_link_illegitimate_international_actor

Task

Determine whether the post satisfies both of the following conditions with respect to the same international actor:

Condition 1:

The post contains one or more claims that portray an international actor as domestically illegitimate (as defined by the explanation of what constitutes claims that portray an actor as domestically illegitimate).

Do not require explicit criticism or explicitly evaluative language. A factual or descriptive claim portraying the international actor as incapable, ineffective, functioning unsuccessfully, lacking important capacities, or producing harmful outcomes can also satisfy this condition.

AND

Condition 2:

The post contains one or more claims that portray a positive relationship between that same international actor and at least one of the following regime-threat actor groups (as defined by the explanation of what constitutes a positive relationship):

- Alexei Navalny and/or the political opposition to the Russian regime
- the Wagner Group and/or Yevgeny Prigozhin

- the perpetrators of the Crocus City Hall attack and/or ISIS-Khorasan (shortened as ISIS-K).

The regime-threat actor restriction is essential. Do not code relationships with other opposition figures, dissidents, terrorists, extremists, traitors, or other actors unless they belong to one of the three specified regime-threat actor groups above. For example, it is not sufficient that an actor is described as a terrorist for the claim to concern ISIS-K or the Crocus City Hall perpetrators. The positive relationship must involve one of the specified regime-threat actor groups.

Code

1 = The post satisfies both conditions with respect to the same international actor.

0 = The post does not satisfy both conditions with respect to the same international actor.

Only determine whether both conditions are satisfied with respect to the same international actor.

The number of claims satisfying each condition does not matter.

VARIABLE 8 OF 13

Variable ID:

regime_threat_actor_negative_link_legitimate_international_actor

Task

Determine whether the post satisfies both of the following conditions with respect to the same international actor:

Condition 1:

The post contains one or more claims that portray an international actor as domestically legitimate (as defined by the explanation of what constitutes claims that portray an actor as domestically legitimate).

Do not require explicit praise or explicitly evaluative language. A factual or descriptive claim portraying the international actor as capable, effective, functioning successfully, possessing strong capacities, or able to achieve beneficial outcomes can also satisfy this condition.

AND

Condition 2:

The post contains one or more claims that portray a negative relationship between that same international actor and at least one of the following regime-threat actor groups (as defined by the explanation of what constitutes a negative relationship):

- Alexei Navalny and/or the political opposition to the Russian regime
- the Wagner Group and/or Yevgeny Prigozhin
- the perpetrators of the Crocus City Hall attack and/or ISIS-Khorasan (shortened as ISIS-K).

The regime-threat actor restriction is essential. Do not code negative relationships with other opposition figures, dissidents, terrorists, extremists, traitors, or other actors unless they belong to one of the three specified regime-threat actor groups above. For example, it is not sufficient that an actor is described as a terrorist for the claim to concern ISIS-K or the Crocus City Hall perpetrators. The negative relationship must involve one of the specified regime-threat actor groups.

Code

1 = The post satisfies both conditions with respect to the same international actor.

0 = The post does not satisfy both conditions with respect to the same international actor.

Only determine whether both conditions are satisfied with respect to the same international actor.

The number of claims satisfying each condition does not matter.

VARIABLE 9 OF 13

Variable ID:

regime_willing_to_use_repression

Task

Determine whether the post contains one or more claims that portray the Russian

regime or its authorities as willing to use, threatening to use, or actually using physical sanctions against Russian individuals, Russian organizations, or individuals and/or organizations located within the territorial jurisdiction of the Russian regime.

Physical sanctions include coercive actions imposed or enforced by state authorities, such as arrest, detention, imprisonment, searches, legal restrictions, fines, or other forms of coercive punishment or restriction. The post does not need to explicitly describe these actions as repression.

A factual or descriptive claim that the Russian regime or its authorities have carried out, threatened, proposed, or imposed such a sanction is sufficient to portray the regime as willing to use repression.

Code

1 = The post contains at least one claim that portrays the Russian regime or its authorities as willing to use, threatening to use, proposing, imposing, or actually using physical sanctions against Russian individuals, Russian organizations, or individuals and/or organizations located within the territorial jurisdiction of the Russian regime.

0 = The post does not contain such a claim.

Only determine whether at least one such claim is present.

The number of such claims does not matter.

VARIABLE 10 OF 13

Variable ID:

elite_attitudinally_loyal

Task

Determine whether the post contains one or more claims that portray an elite actor in Russia (as defined by the explanation of what constitutes a Russian regime elite actor) as attitudinally loyal to the Russian leading elite by indicating that the actor:

- shares, supports, endorses, defends, or advances the ideology, values, goals, policies, or political direction of the Russian leading elite;

OR

- believes in the continued stability or future survival of the Russian leading elite;

OR

- has a personal or political interest in the continued survival of the Russian leading elite.

Do not require the post to explicitly describe the actor as loyal or to contain an explicit declaration of support for the Russian leading elite. A factual or descriptive claim can satisfy the criterion when the actor's statements, positions, assessments, expressed objectives, or described behavior indicate the actor's attitudes, interests, or alignment with the Russian leading elite.

Importantly, descriptions of behavior can constitute attitudinal loyalty when the post also indicates that the actor carries out that behavior because the actor supports, shares, positively evaluates, or has an interest in the relevant regime goal, policy, or political direction.

Central examples include claims portraying an elite actor as:

- expressing support for or positively evaluating a policy, goal, or political direction of the Russian leading elite;

- carrying out or contributing to a regime policy or objective while also indicating that the actor supports, shares, positively evaluates, or has an interest in achieving that policy or objective.

However, do not infer attitudinal loyalty solely from the fact that an actor holds an elite position, performs routine official duties, implements a policy, or follows an instruction. The claim must also provide some indication of the actor's attitudes, goals, political alignment, interests, or beliefs.

Code

1 = The post contains at least one claim that portrays an elite actor as attitudinally loyal to the Russian leading elite in at least one of the ways specified above.

0 = The post does not contain such a claim.

Only determine whether at least one such claim is present.

The number of such claims does not matter.

VARIABLE 11 OF 13

Variable ID:

elite_behaviorally_loyal

Task

Determine whether the post contains one or more claims that portray an elite actor in Russia (as defined by the explanation of what constitutes a Russian regime elite actor) as behaviorally loyal to the Russian leading elite.

Behavioral loyalty concerns what the elite actor publicly does rather than what the actor personally believes, supports, prefers, or has an interest in.

Positive behavioral loyalty includes behavior that demonstrates support for or acceptance of the Russian leading elite and its political hierarchy. This includes:

- carrying out, implementing, promoting, or contributing to policies, goals, tasks, or responsibilities associated with the actor's role in the Russian regime;

- publicly expressing, endorsing, defending, or promoting the Russian regime, Vladimir Putin, or the policies, goals, or political direction of the regime;
- otherwise acting in accordance with the actor's position and assigned role within the hierarchy of the Russian regime.

Negative behavioral loyalty includes:

- publicly rejecting, opposing, criticizing, or distancing oneself from opposition actors, challengers, or alternatives to the Russian leading elite.

Importantly, behavioral loyalty does not require evidence that the elite actor personally agrees with, believes in, or has an interest in the regime's policies or goals. Carrying out the duties and responsibilities associated with the actor's role within the Russian regime can itself demonstrate behavioral acceptance of the regime hierarchy.

However, merely being identified as an elite actor or holding an official position is not sufficient. The post must describe some behavior, statement, action, policy implementation, or performance of duties by the actor.

Code

1 = The post contains at least one claim that portrays an elite actor as behaviorally loyal to the Russian leading elite in at least one of the ways specified above.

0 = The post does not contain such a claim.

Only determine whether at least one such claim is present.

The number of such claims does not matter.

VARIABLE 12 OF 13

Variable ID:

collective_elite_coherent

Task

Determine whether the post contains one or more claims that portray the Russian

regime's collective elite as:

- united behind the Russian regime's senior leadership

OR

- unable to unite behind an alternative leader, unsuccessful in doing so, or having such attempts prevented or contained by the Russian regime's senior leadership.

Do not require the post to explicitly describe the collective elite as "united" or "coherent." A factual or descriptive claim can also satisfy the criterion if it portrays the collective elite as united behind the Russian regime's senior leadership, or portrays attempts to unite the collective elite behind an alternative leader as unsuccessful, prevented, or contained.

The post also does not need to make a general statement that "the Russian elite" is united. Claims about larger formal or informal groups of elite actors can portray collective elite coherence.

For example, this can include claims that:

- a formal elite body, such as the State Duma, collectively supports Putin, the

senior leadership, or another leading elite actor;

- a larger informal grouping of elite actors collectively supports the senior leadership or sides with it against a challenger.

However, support expressed by a single elite actor is not by itself sufficient.

The claim must concern a collective grouping of elite actors.

Code

1 = The post contains at least one claim that portrays the Russian regime's collective elite as coherent in at least one of the ways specified above.

0 = The post does not contain such a claim.

Only determine whether at least one such claim is present.

The number of such claims does not matter.

Variable ID:

external_actors_accountable_regime_threat_consequences

Task

Determine whether the post satisfies both of the following conditions:

Condition 1:

The post contains one or more claims that describe societal consequences (such as protests, deaths, general instability, or similar societal consequences) arising from at least one of the following regime threats:

- Alexei Navalny's death and funeral
- the Wagner Group rebellion
- the Crocus City Hall attack

AND

Condition 2:

The post contains one or more claims that assign one or more external actors

to Russia a causal role in the occurrence of that regime threat and,
consequently, in its societal consequences.

The regime-threat restriction is essential. The societal consequences must arise
from one of the three specified regime threats above. The external actor must be portrayed
as causally contributing to the occurrence of that regime threat.

Code

1 = The post satisfies both conditions.

0 = The post does not satisfy both conditions.

Only determine whether both conditions are satisfied.
The number of claims satisfying each condition does not matter.

OUTPUT INSTRUCTIONS

=====

=====

Output instructions

Classify all 13 variables listed above independently.

You must return exactly 13 classifications:

one classification for each variable and no additional classifications.

Use:

1 = the coding criteria for the variable are satisfied

0 = the coding criteria for the variable are not satisfied

Return valid JSON only in the following structure:

```
{  
  "classifications": {  
    "domestic_legitimization_russian_regime": 0 or 1,  
    "domestic_legitimization_russian_regime_ex_wagner": 0 or 1,  
    "regime_positive_link_legitimate_international_actor": 0 or 1,  
    "regime_negative_link_illegitimate_international_actor": 0 or 1,  
    "regime_protector_collective_security_threat": 0 or 1,  
    "domestic_delegitimization_regime_threat_actors": 0 or 1,  
    "regime_threat_actor_positive_link_illegitimate_international_actor": 0 or 1,  
  }  
}
```

```

    "regime_threat_actor_negative_link_legitimate_international_actor": 0 or 1,
    "regime_willing_to_use_repression": 0 or 1,
    "elite_attitudinally_loyal": 0 or 1,
    "elite_behaviorally_loyal": 0 or 1,
    "collective_elite_coherent": 0 or 1,
    "external_actors_accountable_regime_threat_consequences": 0 or 1
  }
}

```

Requirements:

- Return exactly 13 variable classifications.
- Include every Variable ID listed above exactly once.
- Do not omit any Variable ID.
- Do not add any Variable ID that is not listed above.
- Each classification must be either 0 or 1.
- Do not include any text outside the JSON object.

TELEGRAM POST TO CLASSIFY

=====

=====

Classify the following Telegram post according to all 13 variable-specific coding instructions provided in the system prompt.

<telegram_post>

[Her indsættes den konkrete Telegram-besked]

</telegram_post>

=====

=====

Bilag 8.1.3 – Prompt anvendt til disaggregering af aktørframe (4)

You are performing a deaggregation step for a previous classification.

Only perform the attribution tasks listed below.

Do not reconsider whether the previous classifications are correct.

A previous classification step determined that this post contains one or more claims that portray at least one of the following actor groups as domestically illegitimate:

- Alexei Navalny and/or the political opposition to the Russian regime
- the Wagner Group and/or Yevgeny Prigozhin
- the perpetrators of the Crocus City Hall attack and/or ISIS-Khorasan (ISIS-K).

Your task is not to reconsider whether this previous classification is correct.

Your task is only to determine which of the three actor groups the identified domestic delegitimization applies to.

Code each actor group independently:

1 = The identified domestic delegitimization applies to this actor group.

0 = The identified domestic delegitimization does not apply to this actor group.

At least one of the three actor groups must be coded 1.

More than one actor group may be coded 1.

TELEGRAM POST

</telegram_post>

Bilag 8.1.4 – Prompt anvendt til disaggregering af aktørframe (5)

You are performing a deaggregation step for a previous classification.

Only perform the attribution tasks listed below.

Do not reconsider whether the previous classifications are correct.

A previous classification step determined that this post contains one or more claims portraying at least one of the following actor groups as having a positive relationship with an international actor that is portrayed as domestically illegitimate:

- Alexei Navalny and/or the political opposition to the Russian regime
- the Wagner Group and/or Yevgeny Prigozhin
- the perpetrators of the Crocus City Hall attack and/or ISIS-Khorasan (ISIS-K).

Your task is not to reconsider whether this previous classification is correct.

Your task is only to determine which of the three actor groups the identified positive relationship with a domestically illegitimate international actor applies to.

Code each actor group independently:

1 = The identified positive relationship with a domestically illegitimate international actor applies to this actor group.

0 = The identified positive relationship with a domestically illegitimate international actor does not apply to this actor group.

At least one of the three actor groups must be coded 1.

More than one actor group may be coded 1.

TELEGRAM POST

<telegram_post>

[Her indsættes den konkrete Telegram-besked]

</telegram_post>

Bilag 8.1.5 – Prompt anvendt til disaggregering af aktørframe (6)

You are performing a deaggregation step for a previous classification.

Only perform the attribution tasks listed below.

Do not reconsider whether the previous classifications are correct.

A previous classification step determined that this post contains one or more claims portraying at least one of the following actor groups as having a negative relationship with an international actor that is portrayed as domestically legitimate:

- Alexei Navalny and/or the political opposition to the Russian regime
- the Wagner Group and/or Yevgeny Prigozhin
- the perpetrators of the Crocus City Hall attack and/or ISIS-Khorasan (ISIS-K).

Your task is not to reconsider whether this previous classification is correct.

Your task is only to determine which of the three actor groups the identified negative relationship with a domestically legitimate international actor applies to.

Code each actor group independently:

1 = The identified negative relationship with a domestically legitimate international actor applies to this actor group.

0 = The identified negative relationship with a domestically legitimate international actor does not apply to this actor group.

At least one of the three actor groups must be coded 1.

More than one actor group may be coded 1.

TELEGRAM POST

<telegram_post>

[Her indsættes den konkrete Telegram-besked]

</telegram_post>

Bilag 8.1.6 – Prompt anvendt til disaggregering af aktørframe (12)

You are performing a deaggregation step for a previous classification.

Only perform the attribution tasks listed below.

Do not reconsider whether the previous classifications are correct.

A previous classification step determined that this post contains one or more claims that assign one or more external actors to Russia a causal role in the occurrence of at least one of the following regime threats and, consequently, in the societal consequences arising from that threat:

- Alexei Navalny's death and/or funeral
- the Wagner Group rebellion
- the Crocus City Hall attack

Your task is not to reconsider whether this previous classification is correct.

Your task is only to determine which of the three regime threats the identified external-actor responsibility applies to.

Code each regime threat independently:

1 = The identified external-actor responsibility applies to this regime threat.

0 = The identified external-actor responsibility does not apply to this regime threat.

At least one of the three regime threats must be coded 1.

More than one regime threat may be coded 1.

TELEGRAM POST

<telegram_post>

[Her indsættes den konkrete Telegram-besked]

</telegram_post>

Bilag 8.1.7 – Prompt anvendt til tekstreducering

You are performing a text-cleaning task on a Telegram post that has already been classified as containing one or more specific portrayals.

Your task is to identify numbered text units that can be removed because they do not contribute to any of these portrayals.

The identified portrayals and their descriptions are provided together with the numbered Telegram post.

These classifications are taken as given. Do not reconsider or correct them.

If an identified portrayal does not initially appear to be present, first reason carefully about how the numbered text units could contribute to it when the classification is treated as correct. Consider the portrayal as a whole, including its different components, indirect contributions, contextual information, and relationships between numbered units.

Even if you still believe the classification is incorrect, treat it as given and retain any units that could reasonably contribute under that assumption. If no units could reasonably contribute even under this assumption, make no removals on the basis of that portrayal. Never remove text merely because you believe the classification was incorrect.

TEXT-CLEANING TASK

Evaluate each numbered text unit in the context of the full post and all identified portrayals.

Retain a unit if it can reasonably be understood as contributing directly or indirectly to at least one identified portrayal. This includes units that:

- constitute or contribute to a component of the portrayal;
- provide supporting information, evidence, reasoning, or claims;
- elaborate or provide details about relevant information;
- provide context that helps understand or interpret the portrayal;
- describe connected actors, actions, relationships, motives, causes, consequences, responses, events, or circumstances; or
- otherwise contribute to how a relevant actor, action, relationship, event, or consequence is portrayed.

A unit does not need to contain the complete portrayal or its key wording. Different units may contribute different components, and one unit may make another unit's contribution meaningful or interpretable.

Remove a unit only when you can determine that it does not contribute, directly or

indirectly, to any identified portrayal. If there is a reasonable connection, retain it. When uncertain, retain rather than remove.

Do not remove a unit merely because it:

- does not explicitly mention the relevant actor or central claim;
- is factual, descriptive, background, evidence, elaboration, consequence, or context;
- is less explicit than another unit; or
- consists partly or entirely of a hashtag, handle, emoji, heading, caption, quotation, link, or similar element.

Evaluate hashtags, handles, emojis, headings, captions, quotations, links, and similar elements according to their content and relationship to the portrayals, not their format.

Do not rewrite, summarize, paraphrase, translate, correct, or otherwise modify the text.

Return only the numbers of units that should be removed, with no reasoning or additional explanation. If every unit should be retained, return an empty list.

IDENTIFIED PORTRAYALS

[Her indsættes forklaringen af den/de identificerede aktørframe(s)]

NUMBERED TELEGRAM POST

[Her indsættes den konkrete nummererede Telegram-besked]

OUTPUT FORMAT

Return only a Python-style list containing the numbers of the numbered text units that should be removed.

Any numbered unit appearing in the post may be included in the list.

Examples of valid formatting:

[]

[2]

[2, 8, 14]

The examples above illustrate formatting only. They do not restrict which numbered units may be returned.

Return the numbers in ascending order and include each number at most once.

Do not return ranges such as [2-8].

Do not return explanations, labels, markdown, code fences, or any other text.
